

The fusion of form, function and maintenance freedom.

Fully Fusion-welded for strength

Designed and manufactured to be strong and dependable, our windows feature fusion-welded sashes and mainframes. The vinyl sections are literally welded together to create a solid, one-piece unit that won't come loose or weaken over the years.

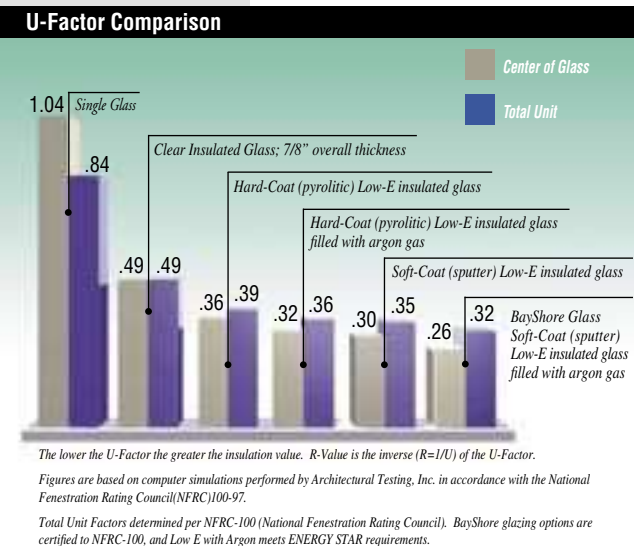

New Generation Vinyl maintenance-free uiPVC

Polyvinylchloride (uiPVC) extrusions provide the utmost in convenience and long-lasting beauty. Because the color is through-and-through, it never needs painting and scratches won't show. Unlike aluminum or wood windows, soap and water keeps our windows looking new. And because uiPVC doesn't conduct heat or cold, it reduces frost and condensation.

Better Glass equals greater comfort

Hi R+Plus® with our 4.2 glass package, a 7/8" single-surface multilayer vacuum-deposition Low-E insulated glass unit filled with argon gas. Original Hi R+Plus delivers 40% more energy efficient than many other types of Low-E glass and over twice as energy efficient as ordinary insulating glass.

Warm-edge Intercept® Glass System

A unique U-shaped channel separates the two panes of glass and interrupts the natural airflow from heat to cold through the unit, reducing the risk of condensation.

Guaranteed to last*

We believe so strongly in the durability of BayShore products that we offer a Limited Lifetime warranty on the entire window unit and it's transferable to the next property owner when you decide to sell your home.

*See warranty for complete details.

Quality that Lasts

How does a window company that started in 1981 with all of five employees grow to be one of the largest manufacturers of vinyl windows and patio doors in North America? Two words: Great Products.

At the heart of our success is an understanding that home-owners have a lot of choice in window manufacturers. What's propelled our growth is a commitment to making our products better. We craft our windows and patio doors to be the perfect complement to today's homes and low maintenance lifestyles. Windows and patio doors created to be an ideal blend of unparalleled beauty and uncompromising performance.

The Great Lakes BayShore window was designed with Quality in Mind, but don't just take our word on it, let the product certification speak for itself.

BayShore Windows with a Low-E argon glass package meet The Department of Energy's ENERGY STAR requirements for your region. The ENERGY STAR Window Program is a voluntary partnership between the U.S. Department of Energy and participating window manufacturers. ENERGY STAR performance requirements are tailored to fit the energy needs of the country's different regions – northern, central and southern states. Your investment in ENERGY STAR windows will pay for itself over time, and then the savings is money in the bank every year!

BayShore Windows ... good for you, good for your home and good for the environment.
